

DEV MANI SHUKLA

SFCC Technical Lead · Enterprise B2C Commerce — Solution Design, Platform Governance & Cross-Team Delivery
Gurgaon, India · devmanis.757@gmail.com · +91 98992 10128 · [linkedin.com/in/dev-mani-shukla](https://www.linkedin.com/in/dev-mani-shukla)

PROFESSIONAL SUMMARY

Technical Lead with 7+ years delivering enterprise-scale Salesforce B2C Commerce (SFCC) platforms for global retail, beauty, and luxury brands, including 5 years on L'Oréal's EMEA D2C program. Lead the largest delivery stream on the account — owning solution design input, technical feasibility, estimation, and delivery governance across L'Oréal's EMEA D2C estate of ~100 e-commerce sites spanning multiple brands and markets. Recognized by L'Oréal leadership for platform-level thinking (designing for reuse, scalability, and consistency) and for translating business needs into sound technical solutions in direct partnership with product owners and architects. Now focused on the next step into solution and platform architecture.

AREAS OF EXPERTISE

Enterprise Solution Design · Platform Governance & Integrity · Scalable & Reusable Architecture · SFCC (SFRA / Headless / PWA Kit) · API & Integration Strategy · Technical Feasibility & Estimation · Cross-Functional Leadership · Stakeholder & Business Partnership · Engineering Quality & Delivery Governance · Technical Mentoring

TECHNICAL SKILLS

Commerce & Architecture: NGL (NG Lora), Salesforce B2C Commerce (SFRA & Headless / PWA Kit), Business Manager, cartridge-based & layered architecture, component-based storefront design

APIs & Integration: REST, OCAPI, SCAPI, GraphQL; service-based and job-based integration patterns

Engineering: JavaScript, Node.js, ISML, Handlebars (HBS), React; Git / GitHub, CI/CD, GitHub Copilot, Test-Driven Development, Agile

Platform Ecosystem: Loyalty In-House (LIH), SFMC, Fluent, Omnibus, OneTrust / consent management, Forter, CRM; HIP middleware & Apigee API gateway

PROFESSIONAL EXPERIENCE

SFCC Technical Lead (Technical Manager) | Capgemini | Client: L'Oréal, EMEA D2C | Sep 2021 – Present | Gurugram

- Lead the BUILD + CHANGE team — the program's largest delivery stream — owning new-feature development, change requests, estimation, and execution governance across markets, brands, and storefronts.
- Proposed and designed a standardized, repeatable rollout approach for L'Oréal's Loyalty In-House (LIH) solution — replacing slow, site-by-site custom builds with a standardized requirements format and a reusable delivery pattern — that cut the effort to launch LIH on a new site from ~8 weeks to ~4 days and now applies across all future site, brand, and country rollouts; adopted as the standard after L'Oréal's product owner championed the model to the business.
- Work natively within L'Oréal's NG Lora layered cartridge architecture (Global → Zone → Brand → Country → Site), designing and reviewing component-based storefront solutions that scale cleanly across ~100 e-commerce sites spanning EMEA brands, countries, and markets.
- Contribute to L'Oréal's standing weekly SFCC architecture forum — participating for ~18 months alongside L'Oréal and Capgemini SFCC architects — to shape solution design, technical feasibility, and platform-level decisions.
- Partner with L'Oréal product owners, D2C leadership, and business stakeholders from discovery through delivery — consulted on solution direction, platform constraints, and architectural trade-offs; translate business rules into technical limits and, where needed, challenge requirements to land on the most scalable, maintainable solution.
- Designed a reusable Technical Solution Design (TSD) framework in Markdown that encodes every standard section, enabling a single business-requirement input to generate a complete, consistent TSD via GitHub Copilot; contributed to the initial Copilot proof-of-concept that guided GenAI adoption across the team.
- Delivered and safeguarded complex integrations across the commerce ecosystem — Loyalty In-House, Omnibus compliance, SFMC, OneTrust / consent management (GDPR), Forter, Easy Returns, One Consumer, and CRM data feeds (via API services and scheduled flat-file jobs) — with third-party integrations commonly delivered through HIP middleware over Apigee-gated APIs, protecting platform integrity and data consistency.
- Own code-merge management across delivery streams — reviewing, giving feedback on, and merging pull requests from the BUILD, RUN, and Rollout teams to keep the codebase consistent.

- Serve as the primary technical escalation point across streams; enforce engineering-governance and quality practices, delivering major features with near-zero critical production defects.

Associate Technology — SFCC Developer | Publicis Sapient | Dec 2020 – Sep 2021 | Gurugram

- **Internal Commerce Accelerator (R&D):** Developed headless-commerce capabilities — GraphQL API integrations and Lightning Web Components (LWC) — for an internal accelerator prototyping decoupled storefront patterns.
- **Marks & Spencer International:** Delivered PWA integration and site-wide performance improvements, including image lazy-loading, to improve page speed and user experience.

Associate Technology — SFCC Developer | Magna Infotech | Client: Publicis Sapient | May 2019 – Dec 2020 | Gurugram

- **Pandora:** Delivered full-stack SFCC development and integrated Arvato CRM capabilities across the storefront; contributed to feature delivery and defect resolution.

LEADERSHIP & ENABLEMENT

- Design and independently lead a month-long induction program for new hires — delivering structured training, mentoring, and final performance evaluation that accelerates 50+ engineers into productive project delivery.
- Trusted to mentor engineers through formal turnaround programs — often the practice's most difficult cases — setting objectives, coaching through a structured cycle, and owning the final assessment of their readiness to continue on delivery.
- Serve as an SFCC subject-matter expert and Salesforce Commerce Cloud Center of Excellence (CoE) member — setting best practices and technical standards and leading knowledge-sharing sessions across the practice.
- Contribute to technical hiring — evaluating candidates and helping shape engineering standards across the practice.

RECOGNITION

- Star Performer Recognition — L'Oréal, for contributions to SFCC delivery and platform initiatives.
- Salesforce B2C Commerce — Implementation Expert (partner badge).
- Capgemini Connected Manager Program (4.5 months) — leadership development certification.

CERTIFICATIONS

- Salesforce Certified B2C Commerce Developer
- Salesforce Certified AI Associate
- Salesforce Certified B2C Commerce Architect — in progress

EDUCATION

- B.Tech, Computer Science — CCS University, Meerut, India
